COURSE DESCRIPTION

In this course we study sequences of random variables (stochastic processes) that evolve over time such as a price of a stock, the demand for a commodity, the length of a queue, the credit rating of a corporate bond issuer. For such processes one cannot predict with certainty their future values, but we can obtain useful information using a suitable stochastic model to represent how the process evolves over time, and thus obtain the distribution and statistics of future values. The course aims to introduce the fundamentals of stochastic models tools, methods and their applications. The emphasis is on modeling and evaluating uncertainty, simulating complex systems, using data and limited information efficiently, understanding the nature of decision-making, and optimally allocating resources.

COURSE MATERIALS

Required Text:

Recommended:

• Adventures in Stochastic Processes by S. Resnick, 1992

Other resources:
Other Resources: I will provide additional at: reading materials during the course.

Start with: Review of Probability.

Learning Management System: Canvas and I will provide additional at: apdalab.org
Hardware and software requirements:
Notebook pc, basic programing in R or Python.

LEARNING GOALS AND OBJECTIVES

The objective is to introduce you to the models and techniques of Stochastic Processes. This will necessitate some use of theory and computer manipulations of data. However, the goal is not that you will become experts on computer software, but rather to give you a perspective on how stochastic models and techniques are used in practice. Hence, much of the material will be presented in a setting of practical situations. The focus is on ways of modeling and structural ideas about systems that evolve randomly in time.

The course will focus on Chapters 3, 4, 5, 6 and 7 from Ross’s text: Poisson processes, renewal processes, discrete and continuous time Markov chains. Additionally, a portion of chapter 9, the Wiener Process and Machine Learning applications will be included. Further, some extra topics such as simulation and applications to optimization of Markov Chains will be introduced. The discussion of Markov chains includes statistical aspects of these processes. The course will begin with a review of basic probability. If time permits, applications to Machine Learning will be introduced.

Specific goals: There will be an introduction to the concepts and applications of those basic ideas that are considered to be most important for the practical analysis of stochastic processes, listed below.

PREREQUISITES

b) Calculus with a grade of B or better; or 22:135:571 Calc for Mgrs.

ACADEMIC INTEGRITY

I do NOT tolerate cheating. Students are responsible for understanding the RU Academic Integrity Policy http://academicintegrity.rutgers.edu/

I will strongly enforce this Policy and pursue all violations. On all examinations and assignments, students must sign the RU Honor Pledge, which states, “On my honor, I have neither received nor given any unauthorized assistance on this examination or assignment.” I will screen all written assignments through SafeAssign or Turnitin, plagiarism detection services that compare the work against a large database of past work. Don’t let cheating destroy your hard-earned opportunity to learn. See business.rutgers.edu/ai for more details.

ATTENDANCE AND PREPARATION POLICY
Grade performance is a demonstrated function of attendance, preparation and participation. You can get behind very easily by skipping classes, resulting in a poor understanding of the material, which will show up as a poor grade for the class. Any class sessions missed by the student are the student’s responsibility to make up, not the instructor’s. Late arrival that causes disruption, early departure that causes disruption, excessive conversation among students (a disruption in its own right), inappropriate use of electronic devices that cause disruptions, and other actions that disrupt the classroom are unacceptable.

If I am to be absent, my department vice chair or I will send you notice via email and Canvas as far in advance as possible. If you are to be absent, report your absence in advance at https://sims.rutgers.edu/ssra/. If your absence is due to religious observance, a Rutgers-approved activity, illness, or family emergency/death and you seek makeup work, also send me an email with full details and supporting documentation within 3 days of your first absence.

Expect me to arrive on time for each class session. I expect the same of you. Expect me to remain for the entirety of each class session. I expect the same of you.

---

**HOMEWORK ASSIGNMENTS**

*Homework Assignments* are designed to help you learn the material discussed in class. In addition, doing a thorough job on the homework assignments is the best preparation for the quiz and the final examination. There are three types of assignments: read, prepare, and hand in.

- **Read**: When the assignment is to read some material, this reading is an important introduction to the topics to be discussed in class. I will make the assumption that you have done the reading before class and have understood much (but not necessarily all) of it. When the assignment is to read a problem, that problem will often be used in class to introduce new concepts.

- **Prepare**: Fully analyze the problem. Be ready to discuss it in class using Zoom Share-Screen share screen, with the numbers computed, etc. I will call on people, so please be ready.

- **Hand In**: The same as prepare, but you must turn in your analysis. All written assignments must be handed in at the beginning of class on the day they are due, and so you will probably want to make a copy of your assignment for reference during class. All written assignments will be graded. These assignments should be submitted in typed form using a word processor. Please write your name, RUID and email on all homework submitted. Team work on this homework is not allowed. Unless a documented reason is produced for unusual circumstances, late submissions will not be accepted more than a week late.

Your class participation will be evaluated subjectively, but will rely upon measures of punctuality, attendance, familiarity with the required readings, relevance and insight reflected in classroom questions, and commentary. Your class participation will be judged by what you add to the class environment, regardless of your technical background. Although several lectures will be didactic, we will rely heavily
upon interactive discussion within the class. Students will be expected to be familiar with the readings, even though they might not understand all of the material in advance. In general, questions and comments are encouraged. Comments should be limited to the important aspects of earlier points made and reflect knowledge of the readings. You may called on to answer questions about the homework or classroom discussion. Your classroom participation evaluation is based on the extent to which you contribute to the learning environment. However, correcting a mistake of the professor and asking what appear to be “dumb questions” about what is being covered are positive contributions. In the case of so-called “dumb questions,” very often half of the class will have the same questions in mind and are relieved to have them asked.

Other requirements are: On-time arrival to the Zoom classes, with uninterrupted attendance for the duration.

Maintenance of a professional atmosphere - use respectful comments and mute the microphone when not speaking.

Refraining from distracting or disrespectful activities, e.g., avoiding side conversations.

Courtesy towards all participants in the Zoom ‘classroom’.

If your absence is due to religious observance, a Rutgers-approved activity, illness, or family emergency/death and you seek makeup work, also send an email with full details and supporting documentation within 3 days of your absence.

CLASSE ROM CONDUCT

The course will be largely taught using Zoom presentation. Class-related material (lecture notes, messages, etc.) will be posted on the class site. Additional visual material and demos may be shown in some classes. Most of your work will take place outside the classroom, as you study, and apply the material to which you are introduced in class.

EXAMS AND GRADING

Your grade\(^1\) will be based on a final exam, a quiz, case write-ups, homework assignments, and class participation, as follows:

Mid Term exam (3-hour exam) 40%
Final exam (3-hour exam) 50%

\(^1\) Your final grade is not subject to negotiation. If you feel I have made an error, submit your written argument to me within one week of receiving your final grade. Clarify the precise error I made and provide all due supporting documentation. If I have made an error, I will gladly correct it. But I will adjust grades only if I have made an error.
Homework and class participation and conduct
10% All exams will be take-home.

---

**COURSE SCHEDULE**

**Tentative Course Outline.**

Weeks 1-3: Basic concepts

(a) Conditional Probabilities and Conditional Expectations.
(b) Generating Functions
(c) Large Deviations and Insurance problems.
(d) The Poisson Process.
   - Exponential Distribution.
   - Defining the Poisson Process.
   - Compound Poisson Processes.
(e) Renewal Processes.
   - Laws of Large Numbers.
   - Key Renewal Theorems.

Week 4: Random Walks

(a) Special Examples.
(b) Exit Distributions and Exit Times.
(c) Harris Paper.

Weeks 5-6: Markov Chains.

(a) Transient probabilities, Stationary probabilities.
(b) Classification of States.
(c) Drifts and Limit Behavior.
(d) Unstable Systems.
(e) Geometric Ergodicity Papers.
(f) Semi-Markov Chains.

Weeks 9-10: Markov Decision Processes.
(a) Examples, Basic Properties.
(b) Optimality Criteria.
(c) Value functions and Solution Methods.
(d) Inventory Control Models.
(e) Random Supply Models.

(a) Gambling Strategies, Stopping Times.
(b) The Multi Armed Bandit Problem.
(c) Martingales Examples, Basic Properties.
(d) Binomial Model.
(e) Capital Asset Pricing Model.
(f) American Options
(g) Black-Scholes formula
(h) Calls and Puts
(i) Infinitesimal look ahead rules.

SUPPORT SERVICES

[Rutgers University-New Brunswick ODS phone (848)445-6800 or email dsoffice@echo.rutgers.edu]

[Rutgers University-Newark ODS phone (973)353-5375 or email ods@newark.rutgers.edu]

If you are pregnant, the Office of Title IX and ADA Compliance is available to assist with any concerns or potential accommodations related to pregnancy.

[Rutgers University-New Brunswick Title IX Coordinator phone (848)932-8200 or email jackie.moran@rutgers.edu]
If you seek religious accommodations, the Office of the Dean of Students is available to verify absences for religious observance, as needed.

If you have experienced any form of gender or sex-based discrimination or harassment, including sexual assault, sexual harassment, relationship violence, or stalking, the Office for Violence Prevention and Victim Assistance provides help and support. More information can be found at [http://vpva.rutgers.edu/](http://vpva.rutgers.edu/).

If students who have experienced a temporary condition or injury that is adversely affecting their ability to fully participate, you should submit a request via [https://temporaryconditions.rutgers.edu](https://temporaryconditions.rutgers.edu).

If you are a military veteran or are on active military duty, you can obtain support through the Office of Veteran and Military Programs and Services. [http://veterans.rutgers.edu/](http://veterans.rutgers.edu/)

If you are in need of mental health services, please use our readily available services.

[http://counseling.newark.rutgers.edu/](http://counseling.newark.rutgers.edu/)
If you are in need of **physical health** services, please use our readily available services.

[Rutgers Health Services – Newark: [http://health.newark.rutgers.edu/](http://health.newark.rutgers.edu/)]

[Rutgers Health Services – New Brunswick: [http://health.rutgers.edu/](http://health.rutgers.edu/)]

If you are in need of **legal** services, please use our readily available services: [http://rusls.rutgers.edu/](http://rusls.rutgers.edu/)

Students experiencing difficulty in courses due to *English as a second language (ESL)* should contact the Program in American Language Studies for supports.

[Rutgers–Newark: PALS@newark.rutgers.edu]

[Rutgers–New Brunswick: eslpants@english.rutgers.edu]

If you are in need of additional **academic assistance**, please use our readily available services.
